

Scatter plot showing the relationship between $-\log_{10}(P)$ tissue (Y-axis) and $-\log_{10}(P)$ stool (X-axis) for various bacterial taxa. The Y-axis ranges from -2 to 0, and the X-axis ranges from -2 to 1. A vertical dotted line is drawn at $-\log_{10}(P)$ stool = 0. Taxa are labeled with their names, and red dots represent individual data points. Some taxa have arrows pointing to their respective dots.
